Summary/Plans

Norman Paton

University of Manchester

Observation

- Next GGF is quite soon – 12 weeks to GGF12 document deadline.

Activities

- Socialising the standards proposal.
- Converge documents.
- Evolve specifications.
- Contribute to OGSA Data Architecture Design Team.

Socialising

- Goal: to systematically obtain feedback on the core capabilities of the specifications, and increase participation.

- Mechanism: develop executive summary and questionnaire to allow issues to be explored systematically. Actively interact with relevant parties. Report back by GGF12.

Document Convergence - 1

WS-DAIX

Document Convergence - 2

- Revise the OGSA Data Services Document for GGF12 to take account of feedback and bring into line with standard.
    - Develop/Address issues on GridForge.
    - Regular Telcons discussing issues.
    - Multiple people hands-on with document.

Document Convergence - 3

- Revise the Scenarios for Mapping DAIS Concepts document for GGF12 to include some *general* conclusions. Learn *specific* lessons on mappings for the specifications.
  - Author team to work on general conclusions; circulate for comment (easy – telcons, list).
  - Group to work on consequences of activity for DAIS specification documents (not so easy?).

Evolve Specifications

- Open process logging issues on GridForge.

- Discussion of issues on list and telcons.

- Increase participation in related specifications (e.g. contributing to CIM database model).

- Deliverable:
  - Incremental refinements by GGF12.
  - Quality should be at/near Recommendation level.

OGSA Data Architecture

- Nominate representatives to participate regularly in Telcons, F2F, etc.

- Consider holding DAIS F2F back-to-back with OGSA Data Architecture F2F.
