

Grid Data Distribution

(DAIS F2F at IBM SFO -1/23/2004)

Vitthal Gogate

- Background
 - Canonical policy based specifications for event and data distribution w/ initial focus on data replication as use case of GDD
 - IBM and Oracle are primary participants at this moment though we expect more participation down the road
- WS-Resource framework
 - We are not worried at this point what framework we use as long as it is efficient w/ enough tooling support etc.
- WS-Notification framework
 - As compared to OGSF 1.0 Notification specs WS-Notification specs are more concrete
 - We plan to investigate, if we can use it as a base framework and leverage it for data distribution (No commitment for GGF10)
